My Keys:

My main goal was to make an affordable decent lightweight key. I am not trying to take the place of your keepsake name_brand key. Want to provide you something that works decently and will be able to give clean code copy.

I am always experimenting, so all are subject to change. I appreciate input from all users.

[A review of the K0MBT mini-mini key.](#)

Take a look....

Basic Minikey

The Mini is my most basic key and is the most popular to date. It has screw terminals to attach your key wiring. It is \$15 including shipping and handling in the USA.

Mini-Mini straight key

The Mini-Mini is has a wire strain relief in addition. It is about half the size of the Mini but has a very similar action. It is \$20 including S+H USA

WARNING: The heating board plate generates high temperature that can cause injury. Never touch it while it is in operation. Always allow the J.AZLA Duplicator to cool down before reaching inside.

Here is a peek at my newest prototype.

As I have made side to side keys I realized that there had to be an alternative way to hold it down. These keys are printed on a sheet of glass giving a very smooth surface. I thought that I could use the weight of the hand to hold the key to a flat surface. It seems to work pretty good. I am still working on it but it is pretty close to being released.

Single paddle Key and 2 paddle Key

These keys can be wired with an electronic keyer or as a Cootie or Sideswiper style. The Single paddle is \$25 including shipping and handling and the two paddle is \$27. Please tell me how you want it wired. I will wire it for an electronic keyer if you don't have a preference.

Be sure to update this information sheet as I plan on offering new designs.

If you do order a key please let me know how you like it.

The best method of payment is PayPal. My paypal address is bexbalfour@gmail.com My personal email is davesters@hotmail.com .

Please email me to see if I have the key you want in stock. Usually build time is one or two days if it isn't in stock.

Might make a nice gift to the Morse aspiring ham.

=====

μBITX Raduino reinforcement assembly

I decided to re-do the popular uBITX raduino bracket.

It is now a 3 part unit that can be used with or without the stock display.

Am offering these from my shack to yours for \$15 including hardware and shipping.

I have a couple more pieces in mind but will make this unit upgradable. It should fit the V3, V4 and V5 boards.
